Remote Days

Technical Compliance & Security Overview

Cross-Border Remote Work Compliance Platform for Luxembourg-Based Enterprises

Executive Summary

Remote Days is an enterprise-grade SaaS platform designed to help Luxembourg-based companies maintain compliance with cross-border remote work regulations. The platform provides automated tracking of employee work locations, real-time compliance monitoring, and comprehensive audit trails to satisfy regulatory requirements across France, Belgium, and Germany.

Compliance Automation

- Automated threshold monitoring
- Country-specific regulations
- Real-time compliance alerts
- Proactive risk prevention

Enterprise Security

- AES-256 encryption at rest
- TLS 1.3 in transit
- GDPR compliant by design
- SOC 2 Type II aligned

Supported Compliance Frameworks

Country	Annual Threshold	Regulation	Consequence
France ■■	34 days	Social Security	Tax liability shift
Belgium ■■	34 days	Cross-border agreement	Social contribution changes
Germany ■■	183 days	Tax residency rules	Income tax obligations

Platform Capabilities

Daily Status Tracking — Automated email prompts with one-click response for effortless daily declarations

Real-time Dashboard — Comprehensive compliance overview with threshold visualization and alerts

Mobile Application — Native iOS/Android apps with offline support and push notifications

HR Management Portal — Bulk operations, employee management, and override capabilities

Audit Trail — Immutable logging of all changes with actor identification and timestamps

Request Workflow — Employee-initiated change requests with approval workflow

Data Export — GDPR-compliant data export for employees and comprehensive HR reporting

API Integration — RESTful API with OpenAPI documentation for system integration

Security Architecture

Remote Days implements defense-in-depth security principles with multiple layers of protection to ensure the confidentiality, integrity, and availability of employee data.

Authentication & Access

- JWT tokens with httpOnly cookies
- Bcrypt password hashing (cost factor 12)
- Account lockout after 5 failed attempts
- 15-minute lockout duration
- Role-based access control (RBAC)
- Session management with secure tokens

Infrastructure Security

- TLS 1.3 encryption in transit
- AES-256-CBC encryption at rest
- Content Security Policy headers
- Rate limiting (100 req/min)
- Input validation with Zod schemas
- SQL injection prevention

Password Policy

✓ Minimum 12 characters required
✓ Must contain uppercase and lowercase letters
✓ Must contain at least one number
✓ Must contain at least one special character
✓ Maximum 128 characters supported

Data Privacy & GDPR Compliance

GDPR Article	Requirement	Implementation
Art. 15	Right of Access	Self-service data export in JSON format
Art. 17	Right to Erasure	Account deletion with cascade data removal
Art. 20	Data Portability	Structured data export capability
Art. 25	Privacy by Design	Minimal data collection, encrypted storage
Art. 32	Security of Processing	Encryption, access controls, audit logs

Technical Architecture

Layer	Technology	Purpose
Frontend	React 19, TypeScript, Vite	Modern SPA with type safety
Mobile	React Native, Expo 52	Cross-platform native apps
API	Fastify, Node.js 20+	High-performance REST API
Database	PostgreSQL 15+	ACID-compliant relational data
Hosting	AWS/Cloudflare	Enterprise-grade infrastructure

Operational Excellence

Monitoring & Observability

- Structured JSON logging with Pino
- Security event tracking for audit compliance
- Login attempt monitoring with IP tracking
- Real-time alerting for critical events
- Comprehensive API documentation (OpenAPI/Swagger)

High Availability

- Multi-region deployment capability
- Automatic failover configuration
- Database connection pooling
- Graceful degradation patterns
- Progressive Web App (PWA) with offline support

API & Integration

Remote Days provides a comprehensive REST API with full OpenAPI 3.0 documentation, enabling seamless integration with existing HR systems, payroll platforms, and enterprise identity providers.

Authentication: JWT-based with cookie and Bearer token support

Documentation: Interactive Swagger UI at /documentation

Versioning: Semantic versioning with backward compatibility

Rate Limiting: Configurable limits per endpoint

Webhooks: Event-driven notifications (roadmap)

Compliance Reporting

- Real-time compliance dashboard with threshold visualization
- Daily, weekly, and monthly summary reports
- Individual employee compliance status tracking
- Exportable reports in multiple formats
- Audit-ready documentation generation
- Historical trend analysis

Implementation Timeline

Phase	Duration	Activities
Discovery	1 week	Requirements gathering, compliance mapping, technical assessment
Setup	1-2 weeks	Environment provisioning, SSO integration, initial configuration
Migration	1 week	Historical data import, employee onboarding, training
Go-Live	1 week	Production deployment, monitoring, support handover
